Course Name : Computer Networks									
Course Code	Course Type	Regular Semester	Lecture (hours/we ek)	Seminar (hours/we ek)	Lab. (hours/we ek)	Credits	ECTS		
CMP 220	В	Spring	2.00	0.00	2.00	3.00	6.00		
	Lecturer	Alban Deda, Msc							
Assistant		Erjola Osmani, Msc							
Course language		Albanian							
Course level		Bachelor							
Description		Computer Networking covers one of the broadest fields of the Information Technology. The course covers the basic knoledge of a network, such as OSI Layer and TCP/IP model with all their undersections. The course covers deeply the communications between the protocols, and the configuration of different equipments. Their connections in the distance, troubleshooting and the security of the networking and PCs that are included in it, especially if they are exposed to the outside risk, and the protection of the cybernetic assaults							
	Objectives								
Core Concepts		1.Network Models 2. Topology of cabling 3. Tcp/IP 4. Subnetting 5. Protocols of comunications 6. HTTPS, Telent, SSH, SMTP, PoP3, IMAP4, FTP 7. Static/Dynamic Routings 8. IPv4/IPv6 9. VLAN 10. Virtualization and Cloud Computing 11.Network Monitoring 12. Troubleshooting 13. Disaster Recovery 14. Network Security							
Course Outlin	ie								
Week		Торіс							
1		Networking. OSI and TCP/IP Models General knoledge of networking. Two models of networking, and the clasification of different equipments, and where do they fit in both models. (Fq. 41 - 104)							
2	Cabling and the topologies of Networking Knoledge of cabling and different topologies of networking. The way the equipments are connected in the networking. The types of mediums they use. How they communicate with each other, what kind of protocols they use, and the intermediate equipments that are used for this communication (Fq. 105 – 140)								
3	Basics of ethernet The lecture shows different types of ethernet, as one the basic cabling types of networking. The difference between megabit, gigabit etc. The differences between straight and crossover cabling. How the equpments get connected through a switch, and the maximal distances these types of communication (Fq.141 - 196)								
4	Installation of a real life network This lecture shows the process of the installation of a real life network. The use of diagrams and documentation of network, installation of a network card. Excecution of a simple troubleshooting, and the basis of disaster recovery, in case of any problem occurs (Fq.197 – 280)								
5	TCP/IP Basics The lecture explains the aim, and the use of the ports and protocols. It shows how the TCP/IP protocol works. Subnetting, (Fq.280 – 359)								
6	Routing The lecutre explains the concepts of switching and routing, and the specific equipments that are used in these layers. How router and switch work, and the static/dynamic routing. The configuration of a router. (fq.360 – 425)								
7	TCP/IP Applications Aplications of TCP/IP explains the functions of network services. How can we access remotely the equpments, by enabling the services. Basics of TCP/IP, HTTP, HTTPS, TELENT, SSH, SMTP, POP3, IMAP4, (Fq.426 – 558)								
8	Midterm Exam								

9	methods of au	TCP/IP Security Lecture explains the security that is needed when we create a network. THe methods of authentiaction and access control. Different standarts of TCP/IP Security and implementation of IPv6 (Fq.559 – 698)					
10	technologies a	Remote Connectivity The lecture explains different ways of accessing remotely a network. WAN technologies and the differences between the equipments used. Different topologies used, within two remote. (Fq.699 – 773)					
11	network perfor	Wireless Networking The lecture explains different wireless protocols. Troubleshooting of the network perfomance, and the steps to be taken, in order to protect these wireless equipments from remote attack. (fq.774 - 851)					
12	network techn	Virtualization Cloud Computing and Mobile Networking The concepts of virtualization and storage network technologies. The reasons why these technologies overshine the other methods of storage, such as local keeping of the servers. Advantages and disadvantages (Fq.852 – 916)					
13	cabling and dif	Real life network How to create a real life network, which is made of modems, router, switch, cabling and different hosts that create the network, such as PC, printers and every other equipments that works over TCP/IP. (fq.917 - 955)					
14	and the latter	Management and Security of Network. This lecture explains the risk management in networking, and the latter is under attack, from outside or within its own network equipment. Which are the methods of disaster recovery, and best practices for the protection of network (fq.956 - 1060)					
15	issues, that a r	Monitoring and Troubleshooting of Network This lecture explains how to monitor a network. The issues, that a network may have, when other hosts are added to the network. Which are the standart methods of troubleshooting. The way that SNMP works, and what is its use. Different ways of monitoring (fq.1061 - 1148)					
16	Final Exam						
	Prerequisites	The student must attend the course at a minimum rate of 75%.					
	Literature	• Comptia, Network+, Seventh Edition, Mike Meyers, MC Graw Hill Education, 2018 ISBN 978-1-26-012239-8					
	References	• CCNA Routing and Swtiching Study Guide, Todd Lammle, Sybex,2013 ISBN: 978-1-118-74970-8					
Course Out	come						
1	Studentët do k	kenë përvetesuar në mënyre mjaftuëshmerisht të thellë konceptete network-ut					
2	në atë binar, q	Studentët do jenë të aftë të bejnë kalkulime të ndryshme të subnetting,, kalimet nga sistemi IP në atë binar, qëështë edhe baza e të gjitha veprimeve të mëtejshme të ndarjeve te rrjetave në VLANs të ndryshëm.					
3		Studentët do jenë të aftë të ndërtojnë një rrjet fizik, me të gjitha pajisjet e nevojshme për një LAN (Local Area Network).					
4		Studentët do jenë të aftë të konfigurojnë një gamë të gjerë pajisjesh, si për route-imin ashtu edhe për switching të rrjeteve kompjuterike, sic janë teknologjitë Mikrotik, Cisco, Linksys, HP etj.					
5		Studentët do jenë të aftë të krijojnë rules/rregulla të ndryshme për mbrojtjen e rrjeteve kompjuterike, nga rreziqet e të qënit të ekspozuar në internet.					
6	parapërgatitje shkollës. Kjo ë	Studentët do jenë të aftë të hyjnë në certifikimet më të njohura ndërkombetare, me synim final parapërgatitjen për të qënë të gatshëm për hyrje në tregun e punës, sapo të dalin nga bankat e shkollës. Kjo është një ndër arsyet, se përse u perzgjodh si lëndë Comptia Network+, pasi është një ndër librat dhe certifikimet më të njohura në botë sot për sot, në fushen e rrjetave kompjuterike.
